INSTALLATION OVER RADIANT HEAT SUBFLOORS

The Manufacturer warrants that this Laminate flooring may be installed over water-based radiant-heated subfloors, provided the surface temperature of the system does not exceed 85° F.

IMPORTANT: Due to the speed of sudden temperature changes, which has potential to negatively affect vinyl flooring construction, it is not recommended to install over electrical radiant heating systems. This will not be covered by the manufacturer's warranty. Only radiant heating system using water are acceptable.

Before installing over newly constructed radiant heat systems, operate the system at maximum capacity to force any residual moisture from the cementitious topping of the radiant heat system. Then set the thermostat to a comfortable room temperature for the installation. It is recommended that the radiant heat be applied in a gradual manner after installing the Laminate flooring. Refer to the radiant heat system's manufacturer recommendations for additional guidance.
